

Abstract of the Disclosure

A system for Internet connections, which connects
a user terminal to a network. The system generally
comprises a section for relaying a network connection
5 from a user through an access point, a monitoring
section for monitoring the network connection from the
user through the access point, and a network connection
fee calculation section for calculating a network
connection fee for the user based on a monitoring
10 result of the monitoring unit. the connection fee
calculation section comprises a line connection fee
calculation section for calculating a line connection
fee for a line connection made by the user to the
access point based on user signal source information,
15 which is provided from a telephone company, and a
charge amount calculation section for calculating a
charge amount for the user based on the line connection
fee, calculated by the line connection fee calculation
section.
